

Over the past 50 years, important developments have taken place in surgical and antimicrobial aspects of the management of intestinal surgery and intra-abdominal sepsis. Many new pathogens like *Clostridium difficile*, *Helibacter* and *Ruminococcus* have been described, and many new beta-lactam drugs and quinolones have been introduced. Immunological aspects such as T cell factors and interleukins have been shown to play an important role in the pathogenesis of intra-abdominal sepsis. Important new pieces of surgical hardware, sutures, and surgical glues to salvage solid organs were added to the surgical armanentorium. This new book looks at all of these important developments and more. Over 900 articles were reviewed to synthesize the core information for this book. The editors years of experience in trauma surgery and intra-abdominal sepsis add to the tremendous amount of information found in this book written for physicians, house-staff, and medical students.

Chemical Biology in Regenerative Medicine: Bridging Stem Cells and Future Therapies, Dyspepsia: The Clinical Consequences, The Adolescent Spine, Workbook: for Harmony, Fifth Edition, Puppies Behind Bars: Training Puppies to Change Lives, Los Beatles en todo el mundo: Alemania (Volume 4) (Spanish Edition), Grammar Rocks!: Cross-Curricular Music Fun for the Classroom (Classroom Kit), Film is an Art: Essay by Durgesh Gupta (Film Theory by Durgesh Gupta Book 1), Dark Days, Gastroenterology (Clinics in Family Practice, Volume 6, Number 3, September 2004),
