

Emergency Medicine: Cardiac Care 2: Anticoagulation and Antiarrhythmics (Audio-Digest Foundation Emergency Medicine Continuing Medical Book 27)

Purpose: Audio-Digest Foundation CME/CE activities are designed to provide its learners physicians and other healthcare professionals with continuing education that will help identify clinical problems in their practice settings, provide content to help to solve those problems, and increase their application of knowledge to practice. Audio-Digest Emergency Medicine is specifically designed to provide the participant with state-of-the-art information, including, but not limited to, the care of patients presenting to the emergency department in such areas as: Airway management Asthma Bite wounds Burns Cardiovascular emergencies Domestic violence Drug abuse Envenomations Infectious diseases Ingested foreign bodies Gastrointestinal emergencies Psychiatric emergencies Risk management Pain management Poisoning & Toxicology Resuscitation Sports injuries Trauma

Educational ObjectivesThe goal of this program is to improve the process of anticoagulation and the management of cardiac arrhythmias. After hearing and assimilating this program, the clinician will be better able to:

1. Discuss the challenges involved in the use of heparin and the importance of establishing a standardized protocol in each institution.
2. Describe the preanalytic and analytic variables that affect activated partial thromboplastin time.
3. Recognize heparin-induced thrombocytopenia and manage it appropriately.
4. Differentiate the characteristics of the 4 classes of antiarrhythmic drugs in the Vaughn-Williams classification.
5. Discuss the characteristics of digoxin and recognize digoxin toxicity.
